

# Diamond Select 40/60 Professional Infield Mix

**Diamond Select 40/60 Professional Infield Mix** is a unique blend of sand, clay, and silt that has been specifically designed for groundskeepers and coaches desiring sand based infields. This soil mix will enhance the overall performance of any infield without turning too soft. It is the ultimate soil for wet environments, customized to meet a groundskeeper's expectations and level of play. Screened down to 3/16", this soil offers higher performance in regions with more than 35" of annual rainfall.

**Diamond Select 40/60 Professional Infield Mix** provides a high quality playing surface to programs looking to increase their field's bad weather playability and recovery. It is an excellent solution for wet environments. With proper moisture management, this material will play true, decrease recovery time, increase soil strength, and hold up better during the wet times of the year. Though this blend was designed for Municipals and Youth Leagues, it is an outstanding playing surface for any program in a wet environment.

### Diamond Select 40/60 Professional Infield Mix Tips:

- 1.) The most important aspect of maintaining an infield is moisture management. Even though 40/60 is meant for wet environments, without proper moisture management it will turn soft during long dry periods.
- 2.) Remember to add amendments to your soil. Though our custom soil blends have been designed to meet a professional's standards, soil amendments assist with moisture management, absorption, soil strength, and recovery.

**Specifications:** 72 pounds per cubic foot (Loose) = 1.03 Yards:1 Ton  
84 pounds per cubic foot (Compact) = .88 Yards:1 Ton  
2.75 Cubic Yards covers 1000 sq. ft at a depth of 1"

**Availability:** **Bulk**—5, 10, 15, 24 and 30 Yard Truckloads  
**Supersacks**—2,200 lbs. each, 1 per Pallet

### Recommended Application when renovating an infield:

**Diamond Select 40/60 Professional Infield Mix** should be put down to a depth of 3" – 6" on a standard infield renovation. Once laid evenly, we suggest watering your infield with ½ inch of water, rolling it with a 1000 pound roller to achieve proper compaction, and then laser grading it out at 1/2%.

**INFIELD  
Renovation**

| <b>Baseball Coverage</b>   | <b>Infield</b> | <b>1" Depth</b> | <b>3" Depth</b> | <b>6" Depth</b> |
|----------------------------|----------------|-----------------|-----------------|-----------------|
| 90' Bases (Grass Infield)  | 11,550 sq. ft. | 32 Yards        | 96 Yards        | 192 Yards       |
| 60' Bases (Little League)  | 3,850 sq. ft.  | 11 Yards        | 33 Yards        | 66 Yards        |
| <b>Softball Coverage</b>   | <b>Infield</b> | <b>1" Depth</b> | <b>3" Depth</b> | <b>6" Depth</b> |
| 65' Bases (Slow Pitch)     | 9,200 sq. ft.  | 25 Yards        | 75 Yards        | 150 Yards       |
| 60' Bases (ASA Fast Pitch) | 8,300 sq. ft.  | 23 Yards        | 69 Yards        | 138 Yards       |
